

COMPLETE SAMPLE TRACKING AND MANAGEMENT SOFTWARE

Alpha Technologies introduces complete network enabled sample tracking and management solution for all of your samples, whatever they are and wherever they are stored

ItemTracker allows complete flexibility in handling barcodes

As well as providing ItemTracker, we also provide all the services required to help you get up to speed quickly. This includes hardware such as barcode printers and scanners through to configuration, training and validation.

ItemTracker incorporates totally flexible label design with the ability to save templates. The label can contain any combination of barcodes, text and data fields.

In addition to generating labels from within ItemTracker, externally generated barcodes can be associated with samples.

ItemTracker can use almost any barcode reader. It communicates with the reader using a keyboard wedge interface.
